

BRIDGE SCORER and BRIDGEWEBS MEMBERSHIP DATABASES

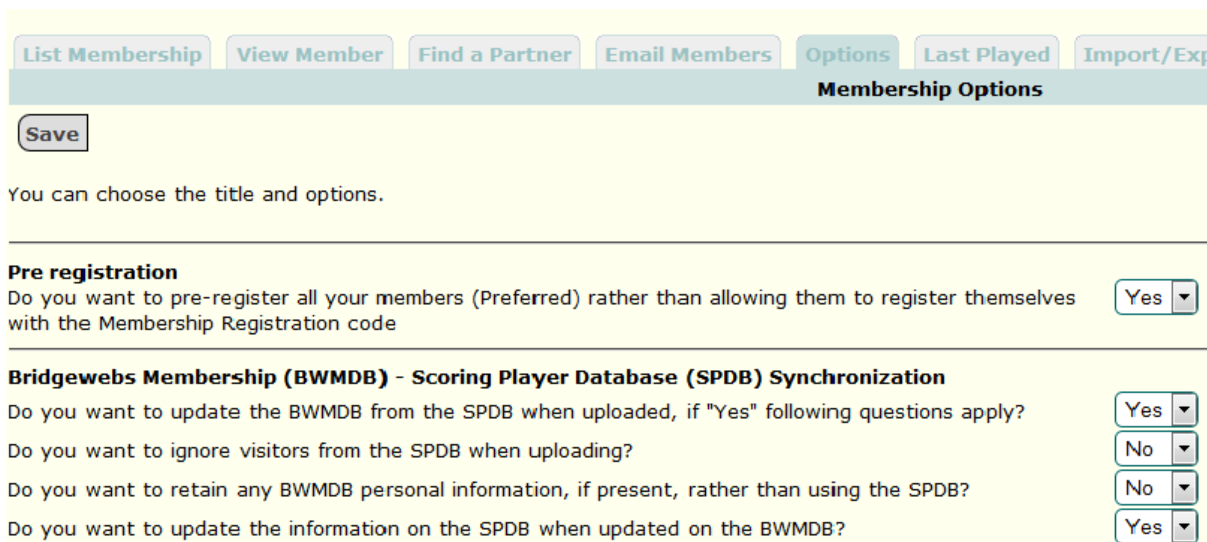

Bridge Scorer can export its database to BridgeWebs. There are two main advantages to this:

1. BridgeWebs database can be kept consistent and up-to-date.
2. If Bridge Scorer is used on more than one computer then other users can download the database. All users will then be using the same database.

Exporting to BridgeWebs does not overwrite fields, such as passwords, which are private to BridgeWebs. It will however update telephone numbers and email addresses if they appear in the Bridge Scorer database. As an option you can also automatically set Competitions Codes depending on each player's EBU rank.

Importing from BridgeWebs to Bridge Scorer will download the database exactly as it was exported. (You need to be using BridgeWebs version 2.19f or later, otherwise some fields might not be imported).

On BridgeWebs you need to go to "Membership" and then "Options" and make sure that the Bridgewebs Membership (BWMDB) – Scoring Player Database (SPDB) Synchronization options are set correctly. See below for recommended settings.

Membership Options

You can choose the title and options.

Pre registration
Do you want to pre-register all your members (Preferred) rather than allowing them to register themselves with the Membership Registration code

Bridgewebs Membership (BWMDB) - Scoring Player Database (SPDB) Synchronization
Do you want to update the BWMDB from the SPDB when uploaded, if "Yes" following questions apply?
Do you want to ignore visitors from the SPDB when uploading?
Do you want to retain any BWMDB personal information, if present, rather than using the SPDB?
Do you want to update the information on the SPDB when updated on the BWMDB?
